

## Wall Panel for Fire Test

Dimensional Coordination

### Blunt edged door on threshold

### Advantages of preassembly

For the performance of fire tests it is advantageous for the customer to provide the complete preassembled wall panel with the door installed :

- the door can be installed into the wall panel at the customer's site without haste
- required adjustments can be effected using all devices available at his site
- the time needed for the preparation of the test in the SAUERLAND Service-Centre can be reduced to a minimum.

The sketches show the dimensional coordination of combustion chamber, assembly frame and wall panel.

### Blunt edged door in block frame
