

## Security Door

Construction

Modern Security doors can look as pretty as any other high quality doors.

Security is a matter of internal strength.

### DETAIL CONSTRUCTION :

#### 1. Steel Tubes :

The steel tubes are rotating freely in the TubeCore  
They are fixed in the grooved hardwood frame.

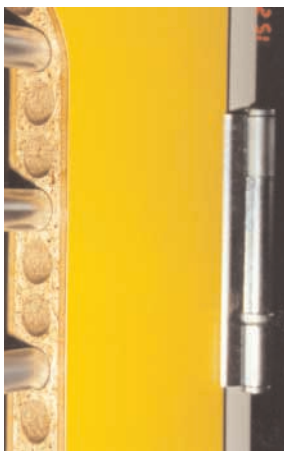

The burglar will not succeed in sawing one of the rotating tubes.

#### 2. Lock System :

The strong lock with special re-inforcements has three locking points.  
Additional to the latch, two bars will invade the steel door frame when locking the door.

#### 3. Hinges :

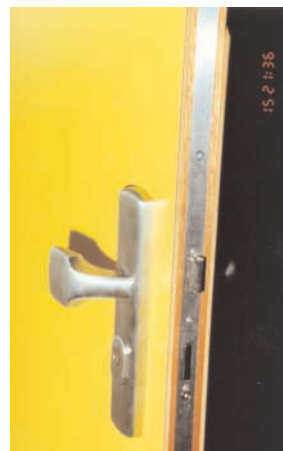

The hinges are constructed for 120 kg stress and have bolts for additional fixing to the hardwood frame.
